It came from them (REOC) to us since they know we are CORS. Trust me, we are not only following protocols, we are pushing back on others to do same. That is a huge problem with this response, much more than in the past. But look at the staffing charts. As of yesterday, 98 people assigned. 8 of us are actually in the field. 26 contractors and the rest "management" help at REOC or HQ.

Such fun

We need to identify a standardize flow or process for requirements for change in the SOW/PWS for the contracts and subsequently the funding to support proposed change and prevent duplication if possible. I know you're busy and would welcome a call when you have a moment.

Please verify that as I may be incorrect. At any rate, we have a request in to have that contractor work over the weekend to support the REOC. It is within the SOW as they have supported us on disasters since before I started at EPA and it was included in the current contract. The concern I have is that we will need to get funding added to that IA sooner rather than later, given that this need for additional support probably isn't going away any time soon.
